

CryptoGram Folder

Worried
about other
people
reading
your
confidential
data?

Complete file encryption solution that enables you to protect and share confidential information by using a smart card or USB key.

Simple

You don't have to be a security expert to be able to use CryptoGram Folder. Thanks to CryptoGram Folder's on-the-fly encryption and decryption, you can work with your files as before.

Secure

Using Triple DES encryption in combination with a smart card or USB key, CryptoGram Folder protects your confidential files with the highest security level that you can find.

Smart

Only a smart card or USB key and your PIN code provide access to your files. Enter the wrong PIN code 3 times and your smart card or USB key is blocked from further use. This offers maximum protection in case of loss or theft.

CryptoGram Folder

Since the introduction of IT, data is being transmitted, received and stored in electronic formats.

Whether it's on your notebook, a network server or flying across the world via e-mail, your data is in a vulnerable state to whoever wants it. The reality is that serious hacking tools are available to anyone willing to spend a few minutes searching the Internet. Simple password protection no longer provides enough security. On the other hand, high maintenance security procedures can be so cumbersome that they will be ignored eventually.

What is needed is non-intrusive, yet effective data security.

CryptoGram Folder is exactly that. Using Triple DES (128 bit) encryption, CryptoGram Folder offers the highest security level you can find. Balancing this incredible strength is CryptoGram Folder's ease of use.

Protect your files

With CryptoGram Folder, you can protect all your files by simply moving them to a special directory. All data stored inside this directory will be encrypted when written and decrypted when read.

Network directories can also be encrypted in order to share confidential files with trusted colleagues.

Additionally, encrypted files can be compressed automatically.

Protect your e-mail

If your message recipients also use CryptoGram Folder and have the same encryption keys, they will be able to seamlessly access the encrypted files you send them via e-mail. If they do not have CryptoGram Folder, you can send them a self decrypting file. CryptoGram Folder is compatible with all e-mail applications.

Remove all traces of your confidential files

CryptoGram Folder can delete files or directories permanently from your hard disk, preventing anyone from retrieving them. You simply click on the file or directory to be erased, or drag it to the CryptoTrash icon on your desktop.

Optional key recovery mechanism

With the optional key recovery mechanism, a company has the possibility to allow security officers access to encrypted data by using a master key.

This enables a company to have access to protected files in case of an emergency.

Take the right steps to protect your company...

CryptoGram Folder features

- CryptoGram Triple DES (128 bit) encryption
- Multi-user capable with private or shared keys
- Support for smart card and USB key
- Workstation lock after period of inactivity
- File and directory encryption
- Self decrypting file generation
- Restrictions on encryption to protect system files
- Optional data compression
- Secure erase
- User or system defined key generation
- Key backup and restore
- Compatible with other CryptoGram software products

Available Products

CryptoGram Folder Professional Edition

Uses hard disk or floppy disk as key holder.

CryptoGram Folder Smart Edition

Uses smart card as key holder. Includes 2 smart cards and card reader (serial or PCMCIA).

CryptoGram Folder iKey™ Edition

Uses a USB key as key holder. Includes 2 iKeys™.

Enterprise Functionality

From a 25 user license onwards, CryptoGram Folder includes additional feature for software distribution, custom installation, key distribution and key recovery.

CryptoGram Folder is compatible with Windows 95, Windows 98, Windows NT 4.0 and Windows 2000
